

## LEVELMASTER®

Monitor your tanks with our groundbreaking new air pulse technology. LEVELMASTER is a gauging system designed for unmatched accuracy and minimal amount of mechanical wear and tear. The accessible interface provides oversight over crucial data, as well as a draught, trim and heel analysis in real time to ensure efficient and safe operations.

### Tank Level & Draught Gauging Solutions

Each LEVELMASTER solution guarantees high accuracy, long-term stability, and effortless integration for dependable operations in all conditions.

### Our Solutions

The LEVELMASTER range offers precise, reliable level gauging for every application. The H8P provides pulsing electro-pneumatic measurement with low air consumption and minimal maintenance, while the H8C delivers continuous, real-time monitoring with the same high accuracy and easy installation.

For complex applications, the H8L combines electro-pneumatic and electric gauging, and the H8M offers tailored retrofit solutions that fit existing piping for fast, cost-effective upgrades.

With over 50 years of expertise, LEVELMASTER systems are low-maintenance, highly accurate, and fully customizable solutions that integrate seamlessly into any automation or monitoring system. Ideal for newbuilds, retrofits, and critical SRtP applications where performance and safety cannot be compromised.

# The future of onboard operation systems

Discover our innovative solutions for all kinds of marine applications, built and perfected over a century. We pair proven technology with modern automation to achieve the most efficient and reliable systems available – made to work flawlessly in the most challenging environments.
